Harmonic Power Meter
Model F25

The Clamp-On Harmonic Meter Model F25 is a portable, battery operated power quality instrument. The Model F25 combines the simplicity and familiarity of digital clamp-ons with today’s critical information on poor quality and harmonics. Operation is simple and direct. Select Amps/Volts, AC or DC on the rotary dial, connect and measure. The push of a button gives additional or more specific information. You can troubleshoot and measure power quality and harmonics with the ease of using a digital clamp-on, simply, safely and economically.

The Model F25 performs current and voltage measurements in True RMS as well as current and voltage in DC. It provides immediate readings of Total Harmonic Distortion (%THD), Individual Harmonic orders Hoc and 1st through the 25th, Distortion Factor (%DF), Crest Factor (CF) and Peak of distorted currents and complex voltages. It also gives the Min, Max and Average measurement values so you can record for over 24 hours with an internal clock logging record time. Frequency (Hz) can be measured through either the current or the voltage at any time for the fundamental as well as the individual harmonic orders.

The Model F25 incorporates True RMS electronics and Hall effect technology to ensure accurate readings on distorted waveforms, including variable frequency signals.

The Model F25 is comfortable to hold, compact and easy to maneuver in a crowded breaker panel or transformer. Yet the hooked jaw design facilitates clamping and accommodates two 500 MCM conductors.

The high sensitivity Harmonic Meter Model F25 features another uncommon advantage by measuring low input levels (300mA and 50mV), permitting power quality measurements on low power or idling equipment.
