

DataView[®] Core Release Notes – Version**3.63.0015 Released 2026-03-26****Version 3.63.0015****Feature implementation**

- Added the DTR8511 to the available devices

Bug Fixes

- Fixed issue where the USB where USBIdent misreported the scanned subsidiary number for the cable
- Fixed an issue causing some reports to not populate when sent from the DTR8510
- Fixed an issue where the DTR 8511 reports were not fully populating
- Fixed an issue with the Ground tester report channel graph scaling was incorrect
- Fixed an issue with the ground tester where the report child frame was not syncing
- Fixed an issue for PEL reports where Eq Value of 0 will show as a negative zero
- Fixed an issue with Ground Tested exports causing the X Axis on the clamp frequency page to break
- Fixed an issue with exported data into a basic report occasionally showing a gap in the graph
- Fixed an issue where the DataView reports start one aggregation late
- Fixed an issue where PowerPad 3 reports Meter Frame did not align with the Trend Summary List values
- Fixed an issue where the GTT report graph legend was becoming jumbled while navigating the graph
- Fixed several formatting issues with the EN5016 report from the PAT3
- Fixed an issue where placing an OLE Issue did not provide the user a way to call the help file
